AMENDMENT

Sir:

In response to the Office Action dated December 19, 2001, Applicant herein amends the above-identified application and responds as follows:

In the Claims:

Claim 7 has been amended as follows:

AT
Sub B17
7. (Amended) A dual-mode communication terminal apparatus for wireless communication with a selected base station of one of at least two different communication systems, the communication terminal apparatus being logged on as ready to receive the selected base station, the communication terminal apparatus comprising:

recognition means for recognizing one of the at least two communication systems, the recognized communication system having the selected base station; and

control means for allocating a network address to the recognized communication system under which the communication terminal apparatus can currently be reached and communicating the network address via the selected base station to a control network address stored in a memory of the communication terminal apparatus;

wherein the network address communicated to the control network address stored in memory is used for assisting in handling a call intended for the communication terminal apparatus but directed to a communication system via which the communication terminal apparatus cannot currently be reached.
